Short
 brief

- there are 6 user types: PCMember, (Co)Chair, Author, Speaker, Session Chair, Listener
- PCMembers an (Co)Chairs can be both authors and speakers
- A listener can only choose a section to participate in
- A session chair can only choose a section to supervise (excluding the one they presents in)
- An author can only submit a paper for review and upload a document
    - these 2 actions can only be done before a deadline, given by the (Co)Chairs
- A PCMember has all the use-cases of an author and can bid and review papers and see the reviews of the papers that have been assigned to him.
    - a bid can have 3 results: pleased to review, could review, refuse to reviewer
    - a review can have 7 results: strong reject, reject, weak reject, borderline, weak accept, accept, strong accept
    - bids and reviews must be done by a deadline, given by the (Co)Chairs
- A (Co)Chair has all the use-cases of a PCMember and can modify deadlines, assign papers to reviewers, decide on inconclusive reviews and organize a presentation's sections
- A speaker is an author with an accepted paper. This user can read his paper's reviews and modify it if they so desire and can upload a presentation
    - these actions can be performed until the start of their presentation
- The rooms for each section should be decided by a server-side service which takes into account the number of participants in each section
- an author must register before proposing a paper
- a paper with only positive reviews is accepted by default
- a paper with only negative reviews is rejected by default
- a paper with mixed reviews will be decided upon by a (Co)Chair
    - in such a case they can change the reviewers, ask the previous reviewers to reconsider their evaluations or accept or reject the paper
